

HTML Headings and Paragraphs

Generated Jul 9, 2026 4:53 AM

What We'll Learn

By the end of this lesson, students can use HTML heading and paragraph elements to organize text content on a webpage.

Words We'll Use

- HTML
- Heading
- Paragraph
- Content
- Webpage

Before We Start

When you read a book, module, or website, how do titles and paragraphs help you understand the information?

Let's Understand

HTML headings and paragraphs are used to organize text on a webpage.

Headings are used for titles and section names. HTML has six heading levels:

```
<h1>Main Heading</h1>  
<h2>Subheading</h2>  
<h3>Smaller Subheading</h3>  
<h4>Heading Level 4</h4>  
<h5>Heading Level 5</h5>  
<h6>Heading Level 6</h6>
```

The `<h1>` element is usually used for the main title of the page. The `<h2>` to `<h6>` elements are used for smaller sections.

Paragraphs are written using the `<p>` element.

```
<p>This is a paragraph.</p>
```

A paragraph is used for normal text or explanations on a webpage.

Let's Look at Examples

Basic Heading and Paragraph

This example shows how to use one heading and one paragraph in an HTML document.

```
<!DOCTYPE html>
<html>
<head>
  <title>My First Page</title>
</head>
<body>
  <h1>Welcome to My Webpage</h1>
  <p>This is my first paragraph in HTML.</p>
</body>
</html>
```

Common mistake

Students may forget to close the paragraph tag.

Incorrect:

```
<p>This is my first paragraph.
```

Correct:

```
<p>This is my first paragraph.</p>
```

Mini-check

Which tag is used to create a paragraph?

Using Headings to Organize Sections

This example shows how different heading levels organize webpage content.

```
<!DOCTYPE html>
<html>
<head>
  <title>My School Life</title>
</head>
<body>
  <h1>My School Life</h1>

  <h2>My Favorite Subject</h2>
  <p>My favorite subject is Computer Programming because I enjoy creating webpages.</p>

  <h2>My Daily Routine</h2>
  <p>I attend class, complete activities, and review my lessons at home.</p>
</body>
</html>
```

Mini-check

Which heading should usually be used for the main title of the webpage?

About Me Page

This example shows how headings and paragraphs can be used to create a simple About Me webpage.

```
<!DOCTYPE html>
<html>
<head>
  <title>About Me</title>
</head>
<body>
  <h1>About Me</h1>
  <p>Hello! My name is Carlo. I am a student learning HTML.</p>

  <h2>My Hobby</h2>
  <p>I like playing basketball and watching educational videos online.</p>

  <h3>Why I Like My Hobby</h3>
  <p>It helps me relax, stay active, and learn new things.</p>
</body>
</html>
```

Common mistake

Students may write text directly inside the `<body>` without using paragraph tags.

Incorrect:

```
<body>
  Hello! My name is Carlo.
</body>
```

Correct:

```
<body>
  <p>Hello! My name is Carlo.</p>
</body>
```

Let's Practice

Create a simple HTML page with the following content:

- One main heading using <h1>
- One subheading using <h2>
- Two paragraphs using <p>

Use this topic:

My Favorite Place

Now We Apply

Create a webpage about yourself.

Your webpage should include:

- A main heading for your name
- A paragraph introducing yourself
- A subheading for your hobby
- A paragraph describing your hobby

Challenge Task

Improve your webpage by adding at least three heading levels: <h1>, <h2>, and <h3>.

Make sure the headings are arranged properly from most important to least important.

How Our Work Will Be Checked

- Correct use of heading tags
- Correct use of paragraph tags
- Clear organization of content
- Proper opening and closing tags
- Webpage displays correctly in the browser

Let's Reflect

Why should we use headings instead of making all text the same size?
