

Styling Text in an HTML Document

Generated Jul 8, 2026 8:52 PM

What We'll Learn

By the end of this lesson, students can style text in an HTML document using the `style` attribute to change color, size, alignment, and font appearance.

Words We'll Use

- Style
- Attribute
- Color
- Font Size
- Text Align
- Inline CSS

Before We Start

When you visit a webpage, what makes some text easier to read or more attractive than others?

Let's Understand

Styling text means changing how text looks on a webpage.

In HTML, we can use the `style` attribute to change the appearance of text. This is called inline styling because the style is written directly inside the HTML tag.

Text styles can change the color, size, alignment, font, and other visual parts of the text.

Styling should help make the webpage easier to read. It should not be used randomly or too much because too many styles can make a webpage confusing.

Let's Look at Examples

Changing Text Color

This example shows how to change the color of text using the `style` attribute.

```
<!DOCTYPE html>
<html>
<head>
  <title>Text Color Example</title>
</head>
<body>
  <h1 style="color: blue;">Welcome to My Page</h1>
  <p style="color: green;">This paragraph uses green text.</p>
</body>
</html>
```

Common mistake

Students may forget to use quotation marks around the style value.

Incorrect:

```
<h1 style=color: blue;>Welcome</h1>
```

Correct:

```
<h1 style="color: blue;">Welcome</h1>
```

Mini-check

Which CSS property is used to change text color?

Changing Font Size

This example shows how to change the size of text using font-size.

```
<!DOCTYPE html>
<html>
<head>
  <title>Font Size Example</title>
</head>
<body>
  <h1>Class Announcement</h1>
  <p style="font-size: 20px;">Please read the instructions carefully.</p>
  <p style="font-size: 14px;">Submit your activity before the end of class.</p>
</body>
</html>
```

Common mistake

Students may forget to add the unit, such as px.

Incorrect:

```
<p style="font-size: 20;">Please read carefully.</p>
```

Correct:

```
<p style="font-size: 20px;">Please read carefully.</p>
```

Mini-check

What unit is commonly used with font-size in this lesson?

Aligning Text

This example shows how to align text using text-align.

```
<!DOCTYPE html>
<html>
<head>
  <title>Text Align Example</title>
</head>
<body>
  <h1 style="text-align: center;">My Favorite Hobby</h1>
  <p style="text-align: left;">I like drawing because it helps me express my ideas.</p>
  <p style="text-align: center;">Creativity makes learning more enjoyable.</p>
</body>
</html>
```

Common mistake

Students may use the wrong property name.

Incorrect:

```
<h1 style="align: center;">My Favorite Hobby</h1>
```

Correct:

```
<h1 style="text-align: center;">My Favorite Hobby</h1>
```

Mini-check

Which CSS property is used to center text?

Let's Practice

Create a simple HTML page with:

- One heading
- Two paragraphs
- One text color change
- One font size change
- One centered text

Use the style attribute inside your HTML tags.

Now We Apply

Create a short webpage about your favorite subject.

Your webpage should include:

- A main heading with a text color
- One paragraph with a larger font size
- One paragraph aligned to the center
- Clear and readable text styles

Challenge Task

Improve your webpage by using at least three different text styles.

You may change:

- Text color
- Font size
- Text alignment
- Font family

Make sure your design is readable and not too colorful.

How Our Work Will Be Checked

- Correct use of the `style` attribute
- Proper use of quotation marks around style values
- Text color, size, or alignment is applied correctly
- Webpage is readable and organized
- Code has proper opening and closing tags

Let's Reflect

How can styling text help readers understand important information on a webpage?
