

Adding Table Headings

Generated Aug 4, 2026 9:43 PM

What We'll Learn

By the end of this lesson, students can add table headings using the `<th>` element.

Before We Start

Look at a class record, schedule, or menu.

How do the headings help you understand the information in each column?

Let's Understand

Table headings describe the information contained in each row or column of a table.

The `<th>` element creates a table heading cell.

Like `<td>` elements, each `<th>` element must be placed inside a `<tr>` element.

```
<table>
  <tr>
    <th>Name</th>
    <th>Grade Level</th>
  </tr>
  <tr>
    <td>Angela</td>
    <td>Grade 9</td>
  </tr>
</table>
```

In this example:

- `<table>` creates the entire table.
- `<tr>` creates a table row.
- `<th>` creates a table heading cell.
- `<td>` creates a table data cell.
- Name and Grade Level describe the information in each column.

Web browsers usually display table headings in bold and center them inside their cells.

The `<th>` element should be used for headings, while the `<td>` element should be used for regular table data.

Let's Practice

Study the following HTML table:

```
<table>
  <tr>
    <th>Day</th>
    <th>Subject</th>
    <th>Time</th>
  </tr>
  <tr>
    <td>Monday</td>
    <td>Mathematics</td>
    <td>8:00 AM</td>
  </tr>
  <tr>
    <td>Tuesday</td>
    <td>Science</td>
    <td>9:00 AM</td>
  </tr>
</table>
```

Answer the following questions:

1. How many table headings are present?
2. What are the table headings?
3. Which element creates a table heading cell?
4. How many rows are in the table?
5. How many columns are in the table?
