

Adding Images, Audio, And Video

Generated Jul 15, 2026 9:46 PM

What We'll Learn

By the end of this lesson, students can add images, audio, and video to an HTML webpage using the correct HTML elements and attributes.

Words We'll Use

- Multimedia
- Image
- Audio
- Video
- Source
- Attribute
- Alternative text
- Controls

Before We Start

What images, sounds, or videos have you seen on websites? How do these elements make a webpage more useful or interesting?

Let's Understand

HTML allows us to add multimedia content such as images, audio, and video to a webpage.

The `<img>` element is used to display an image.

```

```

The `src` attribute tells the browser where the image file is located.

The `alt` attribute provides a text description of the image. It is displayed when the image cannot load and helps screen readers describe the image.

The `<audio>` element is used to add sound or music.

```
<audio controls>
  <source src="audio/school-song.mp3" type="audio/mpeg">
  Your browser does not support the audio element.
</audio>
```

The `<video>` element is used to add a video.

```
<video controls width="640">
  <source src="videos/school-tour.mp4" type="video/mp4">
  Your browser does not support the video element.
</video>
```

The `controls` attribute displays buttons for playing, pausing, adjusting the volume, and controlling the media.

A webpage may use local files stored inside the project folder. Organizing files into separate folders makes the project easier to manage.

```
project-folder/
|
├─ index.html
├─ images/
│   └─ school-logo.png
├─ audio/
│   └─ school-song.mp3
└─ videos/
    └─ school-tour.mp4
```

Let's Look at Examples

Example 1: Adding An Image

This example shows how to add an image to a webpage.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Adding an Image</title>
</head>
<body>
  <h1>Our Computer Classroom</h1>

  
</body>
</html>
```

The src attribute contains the location of the image.

The alt attribute describes the image.

The width attribute controls the displayed width of the image.

Common mistake

Students may use an incorrect file name or folder path.

```

```

This will not work when the correct folder name is images.

Mini-check

Which attribute provides a text description of an image?

Example 2: Adding Audio

This example shows how to add an audio file with playback controls.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Adding Audio</title>
</head>
<body>
  <h1>Our School Song</h1>

  <p>Listen to our official school song.</p>

  <audio controls>
    <source src="audio/school-song.mp3" type="audio/mpeg">
    Your browser does not support the audio element.
  </audio>
</body>
</html>
```

The `<source>` element identifies the audio file and its file type.

The `controls` attribute allows the user to play, pause, and adjust the volume.

Common mistake

Students may forget to include the `controls` attribute. Without it, the playback controls may not be visible.

Mini-check

What attribute displays the audio playback buttons?

Example 3: Adding Video

This example shows how to add a video with playback controls.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Adding Video</title>
</head>
<body>
  <h1>School Campus Tour</h1>

  <p>Watch a short tour of our school campus.</p>

  <video controls width="640">
    <source src="videos/school-tour.mp4" type="video/mp4">
    Your browser does not support the video element.
  </video>
</body>
</html>
```

The width attribute controls the displayed size of the video.

The controls attribute gives the user access to the playback controls.

Common mistake

Students may place the closing `</video>` tag before the `<source>` element.

Incorrect:

```
<video controls></video>
<source src="videos/school-tour.mp4" type="video/mp4">
```

Correct:

```
<video controls>
  <source src="videos/school-tour.mp4" type="video/mp4">
</video>
```

Mini-check

Which element is used to identify the video file inside the `<video>` element?

Example 4: Adding Images, Audio, And Video

This example combines an image, an audio file, and a video on one webpage.

```
<!DOCTYPE html>
<html lang="en">
<head>
  <meta charset="UTF-8">
  <meta name="viewport" content="width=device-width, initial-scale=1.0">
  <title>Nature Multimedia Page</title>
</head>
<body>
  <h1>Exploring Nature</h1>

  <h2>Nature Image</h2>
  <p>This image shows a peaceful natural environment.</p>

  

  <h2>Nature Sounds</h2>
  <p>Listen to relaxing sounds from nature.</p>

  <audio controls>
    <source src="audio/nature-sounds.mp3" type="audio/mpeg">
    Your browser does not support the audio element.
  </audio>

  <h2>Nature Video</h2>
  <p>Watch a short video about the natural environment.</p>

  <video controls width="640">
    <source src="videos/nature.mp4" type="video/mp4">
    Your browser does not support the video element.
  </video>
</body>
</html>
```

Common mistake

Students may save the multimedia files outside the project folder or use file paths that do not match the folder structure.

Mini-check

What three HTML elements are used to add an image, audio, and video?

Let's Practice

Complete the missing HTML code.

```
<h2>Our School Logo</h2>

<h2>School Song</h2>

<audio _____>
  <source src="_____" type="audio/mpeg">
  Your browser does not support the audio element.
</audio>

<h2>School Tour</h2>

<video _____ width="640">
  <source src="_____" type="video/mp4">
  Your browser does not support the video element.
</video>
```

Now We Apply

Create an HTML webpage titled **My Multimedia Page**.

Your webpage must include:

- One main heading
- One image with appropriate alternative text
- One audio file with controls
- One video file with controls
- A short description before each multimedia element

Use separate folders for the image, audio, and video files.

How Our Work Will Be Checked

- Correct use of the element
- Correct use of the src and alt attributes
- Correct use of the <audio> element
- Correct use of the <video> element
- Working audio and video controls
- Correct file paths
- Organized HTML structure
- Clear descriptions

Let's Reflect

Why is the alt attribute important when adding images?

What may happen when the file path in the src attribute is incorrect?

Which multimedia element was easiest for you to add?
